Background

As part of a [broader, coordinated attack](#) on transgender people across the country, these newly emerging laws explicitly regulate gender by defining “sex” throughout *all state law* to effectively allow discrimination against transgender people. These laws regulate and define sex as only male or female, typically based on a person's presumed reproductive anatomy, chromosomes, hormones, or other physical characteristics at birth. These laws also define sex as a permanent category, implying that transgender people would never be legally recognized as their gender identity under state law. These laws could have—and in some states, already do have—dangerous implications for transgender people when it comes to bathrooms, identity documents, and other areas of law or policy, but because these government gender regulation laws are often vaguely written, their actual impact may vary across each state.
